

Beamer

A \LaTeX Class for Great-looking Presentations

Diogo Ferrari
Department of Political Science
University of California, Riverside

May 31, 2020

1 Motivation

- Beamer is a \LaTeX package (a class, more precisely) to create presentations using latex.
- If you are a beginner, you can find information [here](#)

This document was created to serve as a template to create beamer presentations. **See file `presentation.tex`**
